## Uniform Mitigation Verification Inspection Form Maintain a copy of this form with the insurance policy

Inspection Date: 9/23///								
Owner Information								
Owner Name: Eastward Shores 4		Contact Person:						
Address: 1863 Bough Au	C.	Home Phone:						
City: Clearwater	Zip: 337/0	Work Phone:						
County: Pinellas		Celi Phone:						
Insurance Company:	Policy #:							
Year of Home:	# of Stories: +200	Email:						
I, Bruce WATS personally conducted the inspection o data I reported is true and correct.		individual who actually performed the inspection), a this form and in my professional opinion, all the						
1. Building Code: What building code w	as used to design and build the	structure?						
<ul> <li>A. 1994 South Florida Building Code (building permit application date of 9/1/1994 or later in Miami-Dade and Broward Counties (also known as the High Velocity Hurricane Zone (HVHZ)).</li> <li>B. Building code prior to the 1994 South Florida Building Code (building permit application date of 8/31/1994 or earlier in Miami-Dade and Broward Counties (HVHZ).</li> <li>C. 2001 Florida Building Code (building permit application date of 3/1/2002 or later outside the HVHZ).</li> <li>D. Building code prior to the 2001 Florida Building Code (building permit application date of 2/28/2002 or earlier outside the HVHZ).</li> <li>E. Unknown or undetermined.</li> </ul>								
<ol> <li>Predominant Roof Covering:</li> <li>Permit Application Date: 1/25/2 or Date of Installation:</li> <li>A. At a minimum meets the 2001 Florida Building Code or the 1994 South Florida Building Code and has a Miami-Dade NOA or FBC 2001 Product Approval listing demonstrating compliance with ASTM D 3161 (enhanced for 110MPH) OR ASTM D 7158 (F, G or H), OR FBC TAS 100-95 and TAS 107-95, OR FMRC 4470 and/or 4471 (for metal roofs).</li> </ol>								
B. Does not meet the above minin	um requirements.							
C. Unknown or undetermined.								
NOTE: At least one photo documenting the existence of each visible and accessible construction or mitigation attribute marked in Sections 3 through 9 must accompany this form.								
3. Roof Deck Attachment: What is the weakest form of roof deck attachment?  A. Plywood/Oriented strand board (OSB) roof sheathing attached to the roof truss/rafter (spaced a maximum of 24" o.c.) by staples or 6d nails spaced at 6" along the edge and 12" in the field. OR- Batten decking supporting wood shakes or wood shinglesOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift resistance of 55 psf.  B. Plywood/OSB roof sheathing with a minimum thickness of 7/16" attached to the roof truss/rafter (spaced a maximum of 24" o.c.) by 8d common nails spaced 6" along the edge and 12" in the fieldOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift resistance of 103 psf.  C. Plywood/OSB roof sheathing with a minimum thickness of 7/16" attached to the roof truss/rafter (spaced a maximum of 24" o.c.) by 8d common nails spaced 6" along the edge and 6" in the fieldOR- Dimensional lumber/Tongue & Groove decking with a minimum of 2 nails per boardOR- Any system of screws, nails, adhesives, other deck fastening system or truss/rafter spacing that has an equivalent mean uplift resistance of 182 psf.  D. Reinforced Concrete Roof Deck.  Inspectors fuitiats Bld Property Address 1863 Bough ADC								
	(5) years provided no materia	al changes have been made to the structure. $Page\ 1\ of\ 4$						

		Li E. Olher:
		☐ F. Unknown or unidentified.
		G. No attic access.
	4.	Roof to Wall Attachment: What is the weakest roof to wall connection?
		A. Toe Nails Rafter/truss anchored to top plate of wall using nails driven at an angle through the rafter/truss and attached to the top plate of the wall.
		Metal attachments on every rafter/truss that are nailed to one side (or both sides in the case of a diamond type clip) of the rafter/truss and attached to the top plate of the wall frame or embedded in the bond beam.
		C. Single Wraps Metal Straps must be secured to every rafter/truss with a minimum of 3 nails, wrapping over and securing to the opposite side of the rafter/truss with a minimum of 1 nail. The Strap must be attached to the top plate of the wall frame or embedded in the bond beam in at least one place.
		D. Double Wraps Both Metal Straps must be secured to every rafter/truss with a minimum of 3 nails, wrapping over and securing to the opposite side of the rafter/truss with a minimum of 1 nail. Each Strap must be attached to the top plate of the wall frame or embedded in the bond beam in at least one place.
		E. Structural Anchor bolts structurally connected or reinforced concrete roof.
		El F. Other:
		C. Unknown or Unidentified
		H. No attic access
	5.	Roof Geometry: What is the roof shape(s)? (Porches or carports that are attached only to the fascia or wall of the host structure and not structurally connected to the main roof system are not considered in the roof geometry determination.)
ļ		A. Hip Roof Hip roof with no other roof shapes greater than 10% of the total building perimeter.
		B. Non-Hip Roof Any other roof shape or combination of roof shapes including hip, gable, gambrel, mansard and other roof shapes not including flat roofs.
		El C. Flat Roof Flat roof shape greater than 100 square feet or 10% of the entire roof, whichever is greater.
	6.	Gable End Bracing: For roof structures that contain gables, please check the weakest that apply:
:		A. Gable End(s) are braced at a minimum in accordance with the 2001 Florida Building Code.
		B. Does not meet the above minimum requirements.
		C. Not applicable, unknown or unidentified.
	7.	Wall Construction Type: Check all wall construction types for exterior walls of the structure and percentages for each:
;		Cl. A. Wood Frame 12 %
		D B. Un-Reinforced Masonry 38 %
		C. Reinforced Masonry %
		D. Poured Concrete %
		E. Other:%
	0	
	8.	Secondary Water Resistance (SWR): (standard underlayments or hot mopped felts are not SWR)  A. SWR Self-adhering polymer modified bitument confine underlayment applied discretizes the characters of the self-self-self-self-self-self-self-self-
		Self adhering polymer modified bitumen roofing underlayment applied directly to the sheathing or foam adhesive SWR barrier (not foamed on insulation) applied as a secondary means to protect the dwelling from water intrusion.
		₩ B. No SWR
		C. Unknown or undetermined.
	9.	Opening Protection: What is the <u>weakest</u> form of wind borne debris protection installed on the structure? (Exterior openings include, but are not limited to: windows, doors, garage doors, skylights, etc. Product approval may be required for opening protection devices without proper rating identification.)
		A. All Exterior Openings (Glazed and Unglazed) All exterior openings are fully protected at a minimum with impact resistant coverings, impact resistant doors and/or impact resistant window units that are listed as wind home database accounts.
	Ins	devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of nectors Initials five Property Address 1863 Bough Ave
	*T	is verification form is valid up to five (5) years provided no material changes have been made to the structure.
	Ol	t-B1-1802 (Rev. 02/10) Adopted by Rule 69O-170.0155  Page 2 of 4

	the following for "Cyclic Pressure and Large Missile Impact". For the HVFIZ, systems must have either a Miami-Dade NOA or FBC Approval marked "For Use in the HVHZ".
	Miami-Dade County Notice of Acceptance (NOA) 201, 202 and 203. (Large Missile - 9 lb.)
	Florida Building Code Testing Application Standard (TAS) 201, 202 and 203. (Large Missile - 9 lb.)
	American Society for Testing and Materials (ASTM) E 1886 and ASTM E 1996. (Large Missile - 9 lb.)
	Southern Standards Technical Document (SSTD) 12. (Large Missile – 9 lb.)
	For Skylights Only: ASTM E 1886/E 1996. (Large Missile - 4.5 lb.)
	[] For Garage Doors Only: ANSI/DASMA 115. (Large Missile – 9 lb.)
	B. All exterior openings are fully protected at a minimum with impact resistant coverings, impact resistant doors and/or impact resistant window units that are listed as windborne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Large Missile Impact":
	☐ ASTM E 1886 and ASTM E 1996. (Large Missile - 4.5 lb.)
	U SSTD 12. (Large Missile – 4 lb. to 8 lb.)
	☐ For Skylights Only: ASTM E 1886/E 1996. (Large Missile - 2 to 4.5 fb.)
IJ	C. All exterior openings are fully protected at a minimum with impact resistant coverings, impact resistant doors and/or impact resistant window units that are listed as windborne debris protection devices in the product approval system of the State of Florida or Miami-Dade County and meet the requirements of one of the following for "Cyclic Pressure and Small Missile Impact":
	Miami-Dade County NOA 201, 202 and 203. (Small Missile – 2grams)
	Florida Building Code TAS 201, 202 and 203. (Small Missile – 2 grams)
	ASTM E 1886 and ASTM E 1996. (Small Missile – 2 grams)
	SSTD 12. (Small Missile – 2 grams)
IJ	D. All exterior openings are fully protected with windborne debris protection devices that cannot be indentified as Miami-Dade or Florida Building Code (FBC) product approved. This does not include plywood/OSB or plywood alternatives (see Answer "H").
All	Glazed Exterior Openings
::	E. All glazed exterior openings are fully protected at a minimum with impact resistant coverings and/or impact resistant window units that meet the requirements of one of the standards listed in Answer "A" of this question. (Large Missile – 9 lb.)
I.J	F. All glazed exterior openings are fully protected at a minimum with impact resistant coverings and/or impact resistant window units that meet the requirements of one of the standards listed in Answer "B" of this question. (Large Missile – 2 lb. – 8 lb.)
i, i	G. All glazed exterior openings are fully protected at a minimum with impact resistant coverings and/or impact resistant window units that meet the requirements of one of the standards listed in Answer "C" of this question. (Small Missile – 2 grams)
	H. <u>All glazed exterior openings</u> are covered with plywood/OSB meeting the requirements of Section 1609 and Table 1609.1.4 of the 2004 FBC (with 2006 supplements).
1 1	<ol> <li>All glazed exterior openings are fully protected with wind-borne debris protection devices that cannot be identified as Miami-Dade or FBC product approved. This does not include plywood/OSB or other plywood alternatives that do not meet Answer II (see Answer "K").</li> </ol>
	one or Some Glazed Openings
(3)	J. At least one glazed exterior opening does not have wind-borne debris protection.
Barra .	K. No glazed exterior openings have wind-borne debris protection. This includes plywood/OSB or plywood alternative systems that do not meet Answer "H".
$\Gamma$	L. Unknown or undetermined.
